TITLE: <u>Pertussis</u> -- selective problems [Presented at the 3rd Scientific Assembly of Polish Epidemiologists and Infectologists, Krakow, 5-6 Oct 64]	
SOURCE: Przegląd epidemiologiczny, v. 19, no. 2, 1965, 141-147	
TOPIC TAGS: pediatrics, vaccine, respiratory system disease	
ABSTRACT: Of 1300 children with pertussis treated 1950-1960, 53 (4.1%) had neurological complications and 26 (49%) of these were fatal. The percentage of fatal cases is decreasing in recent years. Pertussis vaccine began to be manufactured in Poland in 1951. The main side effects are local, seemingly related to idiopathic constitutional sensitivity of subcutaneous tissue. Review of foreign and Polish literature with authors' names but no references.

Klin. Chor. Zakaźnych wieku dzieci. Oddziału Ped. akad. Med. w Warszawie. Przypadek zapalenia mózgu w przebiegu różyczki Death from encephalitis in the course of rubella (German measles) *Pediat. polsk.* 1951, 26/8 (849-852)  
A 6½ year-old girl contracted rubella on March, 27, 1951. After 3 days the symptoms subsided, but on the 4th day she developed convulsions, trismus and became unconscious. The convulsions did not subside. The temperature rose to 41° C. and after 20 hr. the child died. Meningeal symptoms were absent, tendon reflexes remained unchanged. Lumbar puncture yielded CSF under increased pressure. Nonne-Apelt (+), Pandy (+), 31 lymphocytes per cu.mm., glucose 86 mg. per 100 ml., chloride 760 mg. per 100 ml. Leucocytosis 11,000 (4% plasma cells). The post-mortem findings are described. Nine cases of fatal encephalitis following rubella have been published so far in the literature.

BOGDANOWICZ, J. and SZCZEPANSKA, H., Clinic of Children's Infectious Diseases (Klinika Chorob Zakaznych Wieku Dzieci- cego), AM [Akademia Medyczna, Medical Academy] in Warsaw (Director: Prof. Dr. med. J. BOGDANOWICZ)

"The Epidemiological Characteristics of Exanthema Subitum."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 3, [24 Mar] 63, pp 178-179.

Abstract: [Author's Russian summary modified] Authors' own observations (400 cases over a period of seven years) and a search of the literature led them to the following conclusions: Exanthema subitum affects almost exclusively children 6-months to 2-years of age. It is not epidemic or sporadic in nature, and shows a slight rise in the late winter. Although presumably of virus origin (Kempe), it does not seem infectious, even in twins, and occurs mostly in isolated children, although re-curring in the same family. Mode of infection is not known; neither is there any indication of any specific tissues having an affinity for the infection, though some indications exist for delayed permanent damage to nervous system.  TITLE : Studies on the toxic effects of cyanamic Calcium on  
 the Colorado potato beetle  
 ORIG. PUB. : Roczn. Nauk Rolniczych, 1957, 479, No. 2, 455-467  
 ABSTRACT : Experiments in vegetation vessels have shown that, in  
 the presence of high norms of fertilization with cal-  
 cium cyanamide (3 and 5 centnars/hectare), there was  
 death of larvae in sandy soil accompanied by a harmful  
 effect on the plants. However, in experiments in plot  
 lands, fertilization with calcium cyanamide to as much  
 as 3.0 centnars/hectare showed no toxic effects of  
 the chemical on larvae.

"Investigations of Aldol Reactions in Gaseous Phase. VIII. On the Equilibrium Conditions in the Reaction Between Acetaldehyde and Formaldehyde."

Warsaw, Reczniki Chemii, Vol 37, No 2, 1962, pp 277-282.

Abstract: [Authors' English summary modified] Authors established the course of gaseous phase condensation reaction of acetaldehyde and formaldehyde to acrolein, and of the simultaneous side reaction of acetaldehyde condensation to crotonic aldehyde. The study was based on calculations of the thermodynamic potential and the equilibrium constants of both reactions at various temperatures. Relationship of acrolein yield in equilibrium state and of reaction temperature is shown on graphs. Nine references, including 6 Polish, and 3 Western.

Szczepanski Adam, Engineer

TITLE:

Rolled Stock made of High Mechanical Properties Steel and Economic Profiles

PERIODICAL:

Wiadomosci hutnicze 1959, Nr 7/8, pp 213-217 (POLAND)

ABSTRACT:

In Poland the amount of steel needed is higher than steel production. One of the ways to raise steel production is the further extension of the iron and steel industry. 9 million tons of steel and the equivalent amount of rolled stock will be produced in 1965, 15 million tons of steel in 1975. One of the big steel consumers is under construction. For the manufacture of steel-concrete mostly carbon-steel St 37 (Rpl = 22 kg/sqmm) or X is used (approx. 27,000 tons annually). For the manufacture of iron-girders, lately steel St 52 (elastic stress limit 36 kg/sqmm) is being used. In constructional building, a steel quality with a higher stress limit, e.g. St 4 = 2 kg/sqmm, should be used. Further discussed are corrosion-resistant steels, light rib sheets, increase in rolling assortment, economical smelting steels and steels for chemical use. The article can be summed up as follows:

Determination of tin in canned vegetables and fruits from U.S.A. Ludwig Szczepanicki and Zofia Pomorska (P.Z.H., Wrocław, Poland). *Roczniki Państwowego Zakładu Hig.* 1, 194-204(1980)(French summary).—Samples are ashed, extd. with  $\text{HNO}_3$  to remove Fe, Cu, and Pb, and treated with KCN to reduce Sn to its metallic state. Sn is washed with water and dissolved in HCl. Titration with 0.02 N  $\text{K}_2\text{Cr}_2\text{O}_7$  in presence of KI-starch indicator gives accurate results for as low values as 3.5 mg./kg. The  $\text{H}_2\text{S}$  method gives lower and less accurate data. Tomato juice contains 3.5 to 9.5 mg. Sn/kg. food, grapefruit juice 52.7, fruit preserves (with high sucrose content) 3.7-4.0. When these cans are left open, a marked increase in the Sn content is noted for the juices but only a very moderate one in the fruit preserves.

"Prognosis in Myocardial Infarction in Relation to Its Location and Extent in the ECG."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 27, 1 Jul 63, pp 975-979

Abstract: [Authors' English summary modified] Authors investigated the subject in title and report their findings in 3 figures and 5 tables. They conclude that prognosis cannot be made on the basis of the ECG alone, and the same therapeutic principles should be applied in every case of myocardial infarction. There are 22 references: 7 Polish, 4 German, and 11 Western.

"Trial Treatment of Severe Chronic Circulatory Insufficiency with Parmanil."

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 3, [24 Mar] 63, pp 183-184.

Abstract: [Author's English summary] Parmanil was administered together with cardiac glucosides to nine patients with severe chronic circulatory insufficiency. There was no distinct beneficial effect on the cardiac efficiency, although a diminution in the concurrent coronary symptoms was observed. The four references comprise one Polish and three German sources.
